

22mm IEC Pilot Devices

How to configure and buy c3controls 22mm selector switches.

c3controls' single cam design eliminates the need for multiple cam configurations and selector switch configuration nightmares, ensuring 100% cam selection configuration accuracy. c3controls' one cam does it all vs. our competitors who need up to fifteen cams to perform the same function.

To help you configure your c3controls 22mm selector switch on the web, choose from one of the scenarios below.

Scenario 1

I have a c3 part number and no description or an understanding of switch function:

If you have a c3controls part number and you do not have a product description or an understanding of how the switch functions, then click the button below for product configuration codes and descriptions.

Scenario 2

I do not have a c3 part number, but know how I want the switch to perform:

If you do not have a c3controls part number or a product description, and you understand how the switch functions, then click the button below for instructions on how to select your circuit designation, contact block, and mounting position to build your c3controls part number.

Scenario 2

I do not have a c3controls part number, but know how I want the switch to perform.

To create a complete c3controls part number, simply follow the steps below by using the corresponding circuit designation and product configurator charts.

1. Using the circuit designation charts on page 6, choose the chart that corresponds with how many positions you need the switch to have. Example: 2 or 3-positions.
2. For each operator handle position you will need to select a circuit designation that matches the switch performance for each of these positions.
3. Once you have identified each circuit designation code, use the same circuit designation chart to determine the type of block (Normally Open, Normally Closed, etc.) and the mounting position (Left, Right, etc.).
4. Now that you know what type of contact blocks you need and their mounting positions, it is now time to build your complete c3controls part number. Using the product configurator charts on pages 6 and 7, match the c3controls product description and corresponding part number CODE in each of the sections to create your c3controls part number.

Note: When ordering a fully assembled switch, the contact block catalog numbers in the circuit designation charts and the contact block configurator codes may not match. Here is a quick guide to their meanings:

WNO = 1 Normally Open Contact Block

WNC = 1 Normally Closed Contact Block

WDB = 1 Delayed Break Contact Block

WEM = 1 Early Make Contact Block

Example:

3-Position, Maintained, Hand-Off-Auto (HOA) Selector Switch

22mm IEC Non-Illuminated Selector Switch, 3-Position, Maintained, Black Polyester Bezel (Type 4X), Standard Handle with White Insert, and 1 Normally Open Contact Block (left mounted) and 1 Normally Open Contact Block (right mounted).
