c3controls®

Smart Programmable Relays

series 900

Software Download

The c3controls Series 900 Smart Programmable Relay uses the c3controls Series 900 SPR-soft software. SPR-soft software uses ladder logic to allow simple programming and understanding. The software allows up to 250 lines of ladder logic, and includes features such as the relay simulator, which allows for ease of troubleshooting and testing.

To download the software and manual at no additional cost, follow the instructions below.

System Requirements:

Windows 2000, Windows XP, Windows Vista, Windows 7, Windows 8

Pentium II PC (200 MHz or higher)

256MB RAM

80MB free hard drive space

Screen Resolution 800×600 or better

NOTE: Not tested on Windows 98 or NT systems. Contact c3controls if you have one of these systems prior to installation.

Instructions for Download:

1. Download the correct software and manual. Software functions for 32-bit and 64-bit systems.

- If you purchased your Series 900 module before December 10th, 2012 click **here** to download our Series 900 SPR-soft software.
- If you purchased your Series 900 module after December 10th, 2012 click **here** to download our Series 900-soft II software.
- If you purchased your Series 900, Series C module after February 22nd, 2016 click **here** to download our Series 900-soft III software.

2. Run "setup.msi" on Windows 2000 or Windows XP operating systems.

3. Run "msiarun.exe" on Windows Vista, Windows 7, or Windows 8 operating systems.

NOTE: You can import existing SPR-soft programs into SPR-soft II to transfer onto "SERB" base modules.
